

# What brand of home solar power supply is cost-effective

Which solar panel is best for your home?

Monocrystalline panels are the most expensive and most efficient but are also the most common and comprise the best solar setup for home energy. Polycrystalline panels come in second and thin-film panels are the least efficient overall. Most solar panel manufacturers provide monocrystalline systems nowadays.

Which type of solar panels are most efficient?

The most efficient type of solar panels are monocrystalline panels. These have efficiency ratings ranging from 20% to 25%. The efficiency of solar panels refers to the amount of sunlight converted into electricity versus the amount reflected off the panels or lost as heat.

How much do solar panels cost?

The average domestic solar panel system costs £5,000 - £6,000 for a 4kW system ideal for homes with 2-3 bedrooms. This can require between 8 (450W) and 10 (400W) solar panels.

How much can a home save with solar panels?

The average home can save more than £1,100 every year with solar panels! To select the solar panels we review, we look for the most efficient panel a provider offers that's still suitable for residential use. We then score the panels on the following: All data is correct as of 30 October 2024.

What are the different types of solar panels for sale in the UK?

Solar panels for sale in the UK are available in various designs, so you can choose a style best suited to your home. Thin-film panels have a much thinner profile compared with monocrystalline or polycrystalline panels. Monocrystalline panels are black in colour, whereas polycrystalline panels are blue and speckled.

How much does project solar cost?

Although Project Solar does not offer a price list for individual solar panels, the brand claims that the average installation will cost around £8,000. Therefore, from that, we can determine that that is around £800 per panel based on the average solar panel installation that consists of around 10 panels.
