

What is a battery bank?

A battery bank is made up of two or more batteries connected together, either in series or in parallel (see Building a battery bank using amp hour batteries for more on these two wiring techniques). A battery is made up of one or more cells. A battery with one cell is often referred to as a 'single cell battery'.

What is the difference between a battery and a power bank?

Batteries essentially store a chemical solution that has chemical energy and converts this into electrical energy which we can use to power our machines. A power bank is a battery that is specifically tailored to be portable and has just a large enough capacity for consumer electronics like smartphones, tablets, and even laptops.

Do power banks run out of battery?

In a world full of gadgets, running out of battery can be a real problem. That's where power banks come in handy. They're portable, they store power, and they can charge your devices on the go. But with so many options out there, how do you choose the right one?

What is a power bank?
