What is the complete nomenclature for a battery?

The complete nomenclature for a battery specifies size, chemistry, terminal arrangement, and special characteristics. The same physically interchangeable cell size or battery size may have widely different characteristics; physical interchangeability is not the sole factor in substituting a battery. [1]

What does a car battery number mean?

Car battery numbers provide essential information such as group size, cold cranking amps (CCA), reserve capacity (RC), and ampere-hour (Ah) ratings. Group size refers to the battery's dimensions and terminal placement, while CCA measures the battery's ability to start in cold weather. Car batteries are vital to the functionality of your vehicle.

What is a battery designation system?

The current designation system was adopted in 1992. Battery types are designated with a letter/number sequence indicating number of cells, cell chemistry, cell shape, dimensions, and special characteristics. Certain cell designations from earlier revisions of the standard have been retained.

What is a UK vehicle battery code?
