

What size folding solar panel is best for a motorhome

Which solar panel should I choose for my motorhome?

Having two batteries and using it sparingly gets around this. Which solar panel you pick depends entirely on your motorhome's roof. Campers with a pop-up roof lend themselves to thin, semi-flexible panels, while larger motorhomes don't need particularly flat panels and might suit a rigid design better.

Are solar panels a good choice for a caravan or motorhome?

Solar panels are an ever-popular choice and can either be permanently attached to your caravan or motorhome or come in a portable suitcase-like format. The solar panels you choose will depend on what level of power generation you need to achieve in order to be able to use the devices in your vehicle, as well as personal preference.

How many solar panels should a campervan have?

The ideal solar panel configuration depends on the size of your campervan and your power needs. For small campervans with limited roof space and minimal power requirements, consider using one or two 100-150 watt monocrystalline or polycrystalline solar panels.

How do I choose a solar roof for my motorhome?

No two motorhome roofs are alike, and you'll need to choose solar panels that can fit around your skylights, roof lights, vents and aials. Take a look at your roof, using a tape measure to work out which set-up works best.

How much solar power does a motorhome use?

Use the Global Solar Atlas to find the average peak sunlight where you'll be travelling. Generally, your motorhome or caravan solar panels will capture 100W-400W of solar power during peak hours or 1.2 to 3kWh daily. Moving on to power consumption or usage, add up the total starting and running wattages of the devices you plan to power.

Can solar panels help motorhome owners get off the grid?

Perhaps the only limitation is the need to stop for power, whether to fuel up or plug in at a campsite. But solar generators have changed all that, and now, a new generation of solar panels allows motorhome owners even more opportunities to get off the grid and on the road.
