

Which department regulates the energy storage industry

Who regulates electricity storage?

Ofgem is the relevant regulator for electricity storage, though as noted above there is no specific storage regulatory regime. Ofgem has recognised that there are regulatory changes required to enable the full commercial development of storage and it has committed to working with other stakeholders to consult on such changes.

Is energy storage regulated?

Whilst the Department of Business, Energy & Industrial Strategy ("BEIS") and Ofgem have been supportive of energy storage and recognise the benefits and flexibility provided by the various technologies, there is no specific legislation on or regulation of storage at present.

Why are we legislating electricity storage?

Why are we legislating? Electricity storage covers a range of technologies that store low carbon energy for when it is needed, for example in batteries on the wall of your home or business, or in facilities that pump water to higher reservoirs when electricity is abundant, and let it flow back down through a turbine when it is scarce.

What is electricity storage & how does it work?

This measure will facilitate the deployment of electricity storage. The Bill amends the Electricity Act 1989 to, in effect, clarify that electricity storage is a distinct subset of generation, and defines the storage as energy that was converted from electricity and is stored for the purpose of its future reconversion into electricity.

What is the 'cap and floor' regime for long duration electricity storage (LDEs)?

Ofgem is the regulator for Long Duration Electricity Storage and oversees implementation of a 'cap and floor' regime for LDES projects, proposed by the Department for Energy Security and Net Zero (DESNZ). The aim of this regime is to stimulate investment in Long Duration Electricity Storage projects.

How can we create a best-in-class regulatory framework for electricity storage?

This focuses on actions to create a best-in-class regulatory framework by removing regulatory and policy barriers to the implementation of storage, ensuring that markets reflect the value of flexibility to the system and investing in innovation. Defining electricity storage in primary legislation is central to this approach.
