

## Which kind of wall-mounted solar energy is better

Why should you choose wall-mounted solar panels?

Here are some of the benefits of choosing wall-mounted solar panels: 1. Easy Installation: Wall-mounted solar panels are easier to install than roof-mounted panels, especially if you have limited roof space or a roof that is not suitable for solar panel installation.

Are wall-mounted solar panels better than roof-mounted panels?

While wall-mounted panels are generally less efficient than roof-mounted ones, they can be viable in certain scenarios. South-facing walls offer the best sunlight exposure. The tilt and direction of panels are crucial for optimising efficiency, with a 60-degree angle ideal for capturing low winter sun.

What are wall-mounted solar panels?

Wall-mounted solar panels, also known as solar wall panels or solar cladding, are a type of solar panel that is installed on the walls of a building rather than the roof. These panels are designed to capture sunlight and convert it into electricity, which can then be used to power the home's appliances and systems.

Are wall-mounted solar panels a good option in winter?

The winter sun is relatively low in the UK, and energy usage typically increases during winter. Therefore, wall-mounted panels can be particularly beneficial here. Without projecting a panel beyond 200mm from the wall, from the wall, you can mount a typical panel with dimensions 170cm by 110cm at around 80°.

Can solar panels be mounted on a wall?

Roof-mounted solar panels are usually tilted at a 20-50 degree angle, which allows them to capture sunlight when the sun is high in the sky. But most wall-mounted panels are parallel to the wall, or only slightly tilted. It's also harder to fit as many solar panels on a wall as you would on a roof.

Do wall-mounted solar panels produce more electricity?

Some say that wall-mounted solar systems produce less electricity than roof-mounted ones. However, this mostly depends on the time of the year and your location. Most of the time, the wall-mounted solar panel system will produce more energy during the winter. In the summer, they won't generate electricity as much.
